

Exercise 4D

(iv)

Since $AB \parallel CD$ and AD is a transversal.

So, $\angle BAD = \angle ADC$

$$\Rightarrow \angle ADC = 60^\circ$$

In $\triangle ECD$, we have,

$$\angle E + \angle C + \angle D = 180^\circ$$

$$\Rightarrow x^\circ + 45^\circ + 60^\circ = 180^\circ$$

$$\Rightarrow x^\circ + 105^\circ = 180^\circ$$

$$\Rightarrow x^\circ = 180^\circ - 105^\circ = 75^\circ$$

$$\therefore x = 75$$

(v)

In $\triangle AEF$,
 Exterior $\angle BED = \angle EAF + \angle EFA$
 $\Rightarrow 100^\circ = 40^\circ + \angle EFA$
 $\Rightarrow \angle EFA = 100^\circ - 40^\circ = 60^\circ$
 Also, $\angle CFD = \angle EFA$ [Vertically Opposite angles]
 $\Rightarrow \angle CFD = 60^\circ$
 Now in $\triangle FCD$,
 Exterior $\angle BCF = \angle CFD + \angle CDF$
 $\Rightarrow 90^\circ = 60^\circ + x^\circ$
 $\Rightarrow x^\circ = 90^\circ - 60^\circ = 30^\circ$
 $\therefore x = 30$
 (vi)

In $\triangle ABE$, we have,
 $\angle A + \angle B + \angle E = 180^\circ$
 $\Rightarrow 75^\circ + 65^\circ + \angle E = 180^\circ$
 $\Rightarrow 140^\circ + \angle E = 180^\circ$
 $\Rightarrow \angle E = 180^\circ - 140^\circ = 40^\circ$
 Now, $\angle CED = \angle AEB$ [Vertically opposite angles]
 $\Rightarrow \angle CED = 40^\circ$

Now, in $\triangle CED$, we have,

$$\angle C + \angle E + \angle D = 180^\circ$$

$$\Rightarrow 110^\circ + 40^\circ + x^\circ = 180^\circ$$

$$\Rightarrow 150^\circ + x^\circ = 180^\circ$$

$$\Rightarrow x^\circ = 180^\circ - 150^\circ = 30^\circ$$

$$\therefore x = 30$$

***** END *****
