

# Mensuration-I area of a trapezium and a polygon Ex 20.2 Q7

**Answer :**

**Given:**

Length of the parallel sides of a trapezium are 10 cm and 15 cm.

The distance between them is 6 cm.

**Let us**

extend the smaller side and then draw perpendiculars from the ends of both sides.

(i)

Area of trapezium ABCD = (Area of rectangle EFCD) + (Area of triangle AED + Area of

$$= (10 \times 6) + \left[ \left( \frac{1}{2} \times AE \times ED \right) + \left( \frac{1}{2} \times BF \times FC \right) \right]$$

$$= 60 + \left[ \left( \frac{1}{2} \times AE \times 6 \right) + \left( \frac{1}{2} \times BF \times 6 \right) \right]$$

$$= 60 + [3AE + 3BF]$$

$$= 60 + 3 \times (AE + BF)$$

Here,  $AE + EF + FB = 15 \text{ cm}$

And  $EF = 10 \text{ cm}$

$$\therefore AE + 10 + BF = 15$$

$$\text{Or, } AE + BF = 15 - 10 = 5 \text{ cm}$$

Putting this value in the above formula:

$$\text{Area of the trapezium} = 60 + 3 \times (5) = 60 + 15 = 75 \text{ cm}^2$$

(ii)

In this case, the figure will look as follows:

Area of trapezium ABCD = (Area of rectangle ABGH) - [(Area of triangle AHD) + (Area of

$$= (15 \times 6) - \left[ \left( \frac{1}{2} \times DH \times 6 \right) + \left( \frac{1}{2} \times GC \times 6 \right) \right]$$

$$= 90 - [3 \times DH + 3 \times GC]$$

$$= 90 - 3[DH + GC]$$

Here,  $HD + DC + CG = 15 \text{ cm}$

$$DC = 10 \text{ cm}$$

$$HD + 10 + CG = 15$$

$$HD + GC = 15 - 10 = 5 \text{ cm}$$

Putting this value in the above equation:

$$\text{Area of the trapezium} = 90 - 3(5) = 90 - 15 = 75 \text{ cm}^2$$

# Mensuration-I area of a trapezium and a polygon Ex 20.2 Q8

**Answer :**

Given:

Area of the trapezium =  $960 \text{ cm}^2$

And the length of the parallel sides are 34 cm and 46 cm.

Area of trapezium =  $\frac{1}{2} \times (\text{Sum of the parallel sides}) \times (\text{Perpendicular distance between the } ]$

$$\Rightarrow 960 = \frac{1}{2} \times (34 + 46) \times (\text{Height})$$

$$\Rightarrow 960 = 40 \times (\text{Height})$$

$$\Rightarrow \text{Height} = \frac{960}{40} = 24 \text{ cm}$$
