

Trigonometric Identities Ex 6.1 Q17

Answer :

We have to prove $(\sec \theta + \cos \theta)(\sec \theta - \cos \theta) = \tan^2 \theta + \sin^2 \theta$

We know that,

$$\sin^2 \theta + \cos^2 \theta = 1,$$

$$\sec^2 \theta - \tan^2 \theta = 1$$

$$\begin{aligned}(\sec \theta + \cos \theta)(\sec \theta - \cos \theta) &= \sec^2 \theta - \cos^2 \theta \\&= (1 + \tan^2 \theta) - (1 - \sin^2 \theta) \\&= 1 + \tan^2 \theta - 1 + \sin^2 \theta \\&= \tan^2 \theta + \sin^2 \theta\end{aligned}$$

Trigonometric Identities Ex 6.1 Q18

Answer :

We have to prove $\sec A(1 - \sin A)(\sec A + \tan A) = 1$

We know that, $\sec^2 A - \tan^2 A = 1$

So,

$$\begin{aligned}\sec A(1 - \sin A)(\sec A + \tan A) &= \{\sec A(1 - \sin A)\}(\sec A + \tan A) \\&= (\sec A - \sec A \sin A)(\sec A + \tan A) \\&= \left(\sec A - \frac{1}{\cos A} \sin A \right)(\sec A + \tan A) \\&= \left(\sec A - \frac{\sin A}{\cos A} \right)(\sec A + \tan A) \\&= (\sec A - \tan A)(\sec A + \tan A) \\&= \sec^2 A - \tan^2 A \\&= 1\end{aligned}$$

Trigonometric Identities Ex 6.1 Q9

Answer :

We have to prove $(\operatorname{cosec} A - \sin A)(\sec A - \cos A)(\tan A + \cot A) = 1$

We know that, $\sin^2 A + \cos^2 A = 1$

So,

$$\begin{aligned} & (\operatorname{cosec} A - \sin A)(\sec A - \cos A)(\tan A + \cot A) \\ &= \left(\frac{1}{\sin A} - \sin A \right) \left(\frac{1}{\cos A} - \cos A \right) \left(\frac{\sin A}{\cos A} + \frac{\cos A}{\sin A} \right) \\ &= \left(\frac{1 - \sin^2 A}{\sin A} \right) \left(\frac{1 - \cos^2 A}{\cos A} \right) \left(\frac{\sin^2 A + \cos^2 A}{\sin A \cos A} \right) \\ &= \left(\frac{\cos^2 A}{\sin A} \right) \left(\frac{\sin^2 A}{\cos A} \right) \left(\frac{1}{\sin A \cos A} \right) \\ &= \frac{\sin^2 A \cos^2 A}{\sin^2 A \cos^2 A} \\ &= 1 \end{aligned}$$

Trigonometric Identities Ex 6.1 Q20

Answer :

We have to prove $\tan^2 \theta - \sin^2 \theta = \tan^2 \theta \sin^2 \theta$

We know that, $\sin^2 \theta + \cos^2 \theta = 1$

So,

$$\begin{aligned} \tan^2 \theta - \sin^2 \theta &= \frac{\sin^2 \theta}{\cos^2 \theta} - \sin^2 \theta \\ &= \frac{\sin^2 \theta - \sin^2 \theta \cos^2 \theta}{\cos^2 \theta} \\ &= \frac{\sin^2 \theta (1 - \cos^2 \theta)}{\cos^2 \theta} \\ &= \frac{\sin^2 \theta \sin^2 \theta}{\cos^2 \theta} \\ &= \frac{\sin^2 \theta}{\cos^2 \theta} \sin^2 \theta \\ &= \tan^2 \theta \sin^2 \theta \end{aligned}$$
