

Trigonometric Identities Ex 6.1 Q9

Answer :

We know that,

$$\sin^2 A + \cos^2 A = 1,$$

$$\operatorname{cosec}^2 A - \cot^2 A = 1$$

So,

$$\begin{aligned}\cos^2 A + \frac{1}{1 + \cot^2 A} &= \cos^2 A + \frac{1}{\operatorname{cosec}^2 A} \\ &= \cos^2 A + \left(\frac{1}{\operatorname{cosec} A} \right)^2 \\ &= \cos^2 A + (\sin A)^2 \\ &= \cos^2 A + \sin^2 A \\ &= 1\end{aligned}$$

Trigonometric Identities Ex 6.1 Q10

Answer :

We know that,

$$\sin^2 A + \cos^2 A = 1,$$

$$\sec^2 A - \tan^2 A = 1$$

So,

$$\begin{aligned}\sin^2 A + \frac{1}{1 + \tan^2 A} &= \sin^2 A + \frac{1}{\sec^2 A} \\ &= \sin^2 A + \left(\frac{1}{\sec A} \right)^2 \\ &= \sin^2 A + (\cos A)^2 \\ &= \sin^2 A + \cos^2 A \\ &= 1\end{aligned}$$

Trigonometric Identities Ex 6.1 Q11

Answer :

We know that, $\sin^2 \theta + \cos^2 \theta = 1$

Multiplying numerator and denominator under the square root by $(1 - \cos \theta)$, we have

$$\begin{aligned}\sqrt{\frac{1 - \cos \theta}{1 + \cos \theta}} &= \sqrt{\frac{(1 - \cos \theta)(1 - \cos \theta)}{(1 + \cos \theta)(1 - \cos \theta)}} \\ &= \sqrt{\frac{(1 - \cos \theta)^2}{1 - \cos^2 \theta}} \\ &= \sqrt{\frac{(1 - \cos \theta)^2}{\sin^2 \theta}} \\ &= \frac{1 - \cos \theta}{\sin \theta} \\ &= \frac{1}{\sin \theta} - \frac{\cos \theta}{\sin \theta} \\ &= \operatorname{cosec} \theta - \cot \theta\end{aligned}$$

Trigonometric Identities Ex 6.1 Q12

Answer :

We have to prove $\frac{1 - \cos \theta}{\sin \theta} = \frac{\sin \theta}{1 + \cos \theta}$.

We know that, $\sin^2 \theta + \cos^2 \theta = 1$

Multiplying both numerator and denominator by $(1 + \cos \theta)$, we have

$$\begin{aligned}\frac{1 - \cos \theta}{\sin \theta} &= \frac{(1 - \cos \theta)(1 + \cos \theta)}{\sin \theta(1 + \cos \theta)} \\ &= \frac{1 - \cos^2 \theta}{\sin \theta(1 + \cos \theta)} \\ &= \frac{\sin^2 \theta}{\sin \theta(1 + \cos \theta)} \\ &= \frac{\sin \theta}{1 + \cos \theta}\end{aligned}$$
