

#### Lines and angles Ex 14.1 Q13

**Answer :**

Two adjacent angles are said to form a linear pair of angles if their non-common arms are two opposite rays.

- $\angle 1$  and  $\angle 2$
- $\angle 2$  and  $\angle 3$
- $\angle 3$  and  $\angle 4$
- $\angle 1$  and  $\angle 4$
- $\angle 5$  and  $\angle 6$
- $\angle 6$  and  $\angle 7$
- $\angle 7$  and  $\angle 8$
- $\angle 8$  and  $\angle 5$
- $\angle 9$  and  $\angle 10$
- $\angle 10$  and  $\angle 11$
- $\angle 11$  and  $\angle 12$
- $\angle 12$  and  $\angle 9$

Two angles formed by two intersecting lines having no common arms are called vertically opposite angles.

- $\angle 1$  and  $\angle 3$
- $\angle 4$  and  $\angle 2$
- $\angle 5$  and  $\angle 7$
- $\angle 6$  and  $\angle 8$
- $\angle 9$  and  $\angle 11$
- $\angle 10$  and  $\angle 12$

#### Lines and angles Ex 14.1 Q14

**Answer :**

Since OE is the bisector of  $\angle BOD$ ,

$$\therefore \angle DOE = \angle EOB$$

$$\angle 2 + \angle 1 + \angle EOB = 180^\circ \quad (\text{Linear Pair})$$

$$\angle 2 + 2\angle 1 = 180^\circ \quad (\angle 1 = \angle EOB)$$

$$\Rightarrow \angle 2 = 180^\circ - 2\angle 1 = 180^\circ - 2 \times 70^\circ = 180^\circ - 140^\circ = 40^\circ$$

$$\angle 4 = \angle 2 = 40^\circ \quad (\text{Vertically opposite angles})$$

$$\angle 3 = \angle DOB = \angle 1 + \angle EOB = 70^\circ + 70^\circ = 140^\circ$$

$$[\angle 3 = \angle DOB \text{ (Vertically opposite angles)}]$$

#### Lines and angles Ex 14.1 Q15

**Answer :**

One angle of a linear pair is the right angle, i.e.,  $90^\circ$ .

$$\therefore \text{The other angle} = 180^\circ - 90^\circ = 90^\circ$$

\*\*\*\*\* END \*\*\*\*\*
