

Exercise 1C

Question 4:

Draw horizontal line $X'OX$ taken as the x-axis

Take O as the origin to represent 0.

Let $OA = 2$ units and let $AB \perp OA$ such that $AB = 1$ units

Join OB. Then,

$$\begin{aligned} OB &= \sqrt{OA^2 + AB^2} \\ &= \sqrt{2^2 + 1^2} = \sqrt{5} \end{aligned}$$

With O as centre and OB as radius draw an arc meeting OX at P.

Then, $OP = OB = \sqrt{5}$

Now draw $BC \perp OB$ and set off $BC = 1$ unit

Join OC. Then,

$$\begin{aligned} OC &= \sqrt{OB^2 + BC^2} \\ &= \sqrt{(\sqrt{5})^2 + 1^2} = \sqrt{6} \end{aligned}$$

With O as centre and OC as radius, draw an arc, meeting OX at Q.

Then, $OQ = OC = \sqrt{6}$

Thus, Q represents $\sqrt{6}$ on the real line.

Now, draw $CD \perp OC$ as set off $CD = 1$ units

Join OD. Then,

$$\begin{aligned} OD &= \sqrt{OC^2 + CD^2} \\ &= \sqrt{(\sqrt{6})^2 + 1^2} = \sqrt{7} \end{aligned}$$

With O as centre and OD as radius, draw an arc, meeting OX at R. Then

$OR = OD = \sqrt{7}$

Thus, R represents $\sqrt{7}$ on the real line.
