

Pair of Linear Equations in Two variables Ex 3.8 Q3

Answer :

Let the numerator and denominator of the fraction be x and y respectively. Then the fraction is $\frac{x}{y}$

If 1 is subtracted from both numerator and the denominator, the fraction becomes $\frac{1}{3}$. Thus, we have

$$\begin{aligned}\frac{x-1}{y-1} &= \frac{1}{3} \\ \Rightarrow 3(x-1) &= y-1 \\ \Rightarrow 3x-3 &= y-1 \\ \Rightarrow 3x-y-2 &= 0\end{aligned}$$

If 1 is added to both numerator and the denominator, the fraction becomes $\frac{1}{2}$. Thus, we have

$$\begin{aligned}\frac{x+1}{y+1} &= \frac{1}{2} \\ \Rightarrow 2(x+1) &= y+1 \\ \Rightarrow 2x+2 &= y+1 \\ \Rightarrow 2x-y+1 &= 0\end{aligned}$$

So, we have two equations

$$3x - y - 2 = 0$$

$$2x - y + 1 = 0$$

Here x and y are unknowns. We have to solve the above equations for x and y .

By using cross-multiplication, we have

$$\begin{aligned}\frac{x}{(-1) \times 1 - (-1) \times (-2)} &= \frac{-y}{3 \times 1 - 2 \times (-2)} = \frac{1}{3 \times (-1) - 2 \times (-1)} \\ \Rightarrow \frac{x}{-1-2} &= \frac{-y}{3+4} = \frac{1}{-3+2} \\ \Rightarrow \frac{x}{-3} &= \frac{-y}{7} = \frac{1}{-1} \\ \Rightarrow \frac{x}{3} &= \frac{y}{7} = 1 \\ \Rightarrow x &= 3, y = 7\end{aligned}$$

Hence, the fraction is $\boxed{\frac{3}{7}}$.
