

Statistics Ex 7.3 Q7

Answer :

Let the assumed mean be $A = 20$ and $h = 8$.

Class interval :	Mid value (x_i) :	frequency: (f_i)	$d_i = x_i - A$ $= x_i - 20$	$u_i = \frac{1}{h}(d_i)$ $= \frac{1}{8}(d_i)$	$f_i u_i$
0-8	4	6	-16	-2	-12
8-16	12	7	-8	-1	-7
16-24	20	10	0	0	0
24-32	28	8	8	1	8
32-40	36	9	16	2	18
		$\sum f_i = 40$			7

We know that mean, $\bar{X} = A + h \left(\frac{1}{N} \sum f_i u_i \right)$

Now, we have $N = \sum f_i = 40$, $\sum f_i u_i = 7$, $h = 8$ and $A = 20$.

Putting the values in the above formula, we get

$$\begin{aligned}
 \bar{X} &= A + h \left(\frac{1}{N} \sum f_i u_i \right) \\
 &= 20 + 8 \left(\frac{1}{40} \times (7) \right) \\
 &= 20 + \frac{56}{40} \\
 &= 20 + 1.4 \\
 &= 21.4
 \end{aligned}$$

Hence, the mean is 21.4.

Statistics Ex 7.3 Q8

Answer :

Let the assumed mean be $A = 15$ and $h = 6$.

Class interval :	Mid value (x_i) :	frequency: (f_i)	$d_i = x_i - A$ $= x_i - 15$	$u_i = \frac{1}{h}(d_i)$ $= \frac{1}{6}(d_i)$	$f_i u_i$
0-6	3	7	-12	-2	-14
6-12	9	5	-6	-1	-5
12-18	15	10	0	0	0
18-24	21	12	6	1	12
24-30	27	6	12	2	12
		$\sum f_i = 40$			$\sum f_i u_i = 5$

We know that mean, $\bar{X} = A + h \left(\frac{1}{N} \sum f_i u_i \right)$

Now, we have $N = \sum f_i = 40$, $\sum f_i u_i = 5$, $h = 6$ and $A = 15$.

Putting the values in the above formula, we get

$$\begin{aligned}\bar{X} &= A + h \left(\frac{1}{N} \sum f_i u_i \right) \\ &= 15 + 6 \left(\frac{1}{40} \times (5) \right) \\ &= 15 + \frac{30}{40} \\ &= 15 + 0.75 \\ &= 15.75\end{aligned}$$

Hence, the mean is 15.75.

***** END *****
