

Q 1. Without actually performing the long division, state whether the following rational numbers will have a terminating decimal expansion or a non-terminating repeating decimal expansion:

- | | | | |
|-----------------------|---------------------------|---------------------------------|------------------------|
| (i) $\frac{13}{3125}$ | (ii) $\frac{17}{8}$ | (iii) $\frac{64}{455}$ | (iv) $\frac{15}{1600}$ |
| (v) $\frac{29}{343}$ | (vi) $\frac{23}{2^3 5^2}$ | (vii) $\frac{129}{2^2 5^7 7^5}$ | (viii) $\frac{6}{15}$ |
| (ix) $\frac{35}{50}$ | (x) $\frac{77}{210}$ | | |

Answer :

(i) $\frac{13}{3125}$

$$3125 = 5^5$$

The denominator is of the form $5m$.

Hence, the decimal expansion of $\frac{13}{3125}$ is terminating.

(ii) $\frac{17}{8}$

$$8 = 2^3$$

The denominator is of the form $2m$.

Hence, the decimal expansion of $\frac{17}{8}$ is terminating.

(iii) $\frac{64}{455}$

$$455 = 5 \times 7 \times 13$$

Since the denominator is not in the form $2^m \times 5^n$, and it also contains 7 and 13 as its factors, its decimal expansion will be non-terminating repeating.

(iv) $\frac{15}{1600}$

$$1600 = 2^6 \times 5^2$$

The denominator is of the form $2^m \times 5^n$.

Hence, the decimal expansion of $\frac{15}{1600}$ is terminating.

(v) $\frac{29}{343}$

$$343 = 7^3$$

Since the denominator is not in the form $2^m \times 5^n$, and it has 7 as its factor, the decimal expansion of $\frac{29}{343}$ is non-terminating repeating.

(vi) $\frac{23}{2^3 \times 5^2}$

The denominator is of the form $2^m \times 5^n$.

Hence, the decimal expansion of $\frac{23}{2^3 \times 5^2}$ is terminating.

(vii) $\frac{129}{2^2 \times 5^7 \times 7^5}$

Since the denominator is not of the form $2^m \times 5^n$, and it also has 7 as its factor, the decimal expansion of $\frac{129}{2^2 \times 5^7 \times 7^5}$ is non-terminating repeating.

(viii) $\frac{6}{15} = \frac{2 \times 3}{3 \times 5} = \frac{2}{5}$

The denominator is of the form 5^n .

Hence, the decimal expansion of $\frac{6}{15}$ is terminating.

(ix) $\frac{35}{50} = \frac{7 \times 5}{10 \times 5} = \frac{7}{10}$

$$10 = 2 \times 5$$

The denominator is of the form $2^m \times 5^n$.

Q 2. Write down the decimal expansions of those rational numbers in Question 1 above which have terminating decimal expansions.
