

Knowing Our Numbers Ex 1.1 Q13

Answer :

The place value of a digit depends on the place where it occurs, while the face value is the value of the digit itself.

In a number, the digit that have same face value and place value are the ones digit and all the zeroes of the number.

Therefore, in 9,20,78,634, 4 (the ones digit) and 0 (the lakhs digit) have the same face value and place value.
