

Compound Interest Ex 14.1 Q6

Answer :

Given :

$$P = \text{Rs } 16,000$$

$$R = 12.5\% \text{ p. a.}$$

$$n = 3 \text{ years}$$

We know that :

$$\begin{aligned} A &= P \left(1 + \frac{R}{100} \right)^n \\ &= 16,000 \left(1 + \frac{12.5}{100} \right)^3 \\ &= 16,000 (1.125)^3 \\ &= \text{Rs } 22,781.25 \end{aligned}$$

Now,

$$\begin{aligned} CI &= A - P \\ &= \text{Rs } 22,781.25 - \text{Rs } 16,000 \\ &= \text{Rs } 6,781.25 \end{aligned}$$

Compound Interest Ex 14.1 Q7

Answer :

Given :

$$P = \text{Rs } 64,000$$

$$R = 10\% \text{ p.a.}$$

$$n = 1.5 \text{ years}$$

Amount after n years :

$$\begin{aligned} A &= P \left(1 + \frac{R}{200} \right)^{2n} \\ &= 64,000 \left(1 + \frac{10}{200} \right)^3 \\ &= 64,000 (1.05)^3 \\ &= \text{Rs } 74,088 \end{aligned}$$

Now,

$$\begin{aligned} CI &= A - P \\ &= \text{Rs } 74,088 - \text{Rs } 64,000 \\ &= \text{Rs } 10,088 \end{aligned}$$

Answer :

$$\begin{aligned}\text{SI for Mewa Lal} &= \frac{PRT}{100} \\ &= \frac{20,000 \times 18 \times 2}{100} \\ &= \text{Rs } 7,200\end{aligned}$$

Thus, he has to pay Rs 7,200 as interest after borrowing.

$$\begin{aligned}\text{CI for Mewa Lal} &= A - P \\ &= 20,000 \left(1 + \frac{18}{100}\right)^2 - 20,000 \\ &= 20,000(1.18)^2 - 20,000 \\ &= 27,848 - 20,000 \\ &= \text{Rs } 7,848\end{aligned}$$

He gained Rs 7,848 as interest after lending.

$$\begin{aligned}\text{His gain in the whole transaction} &= \text{Rs } 7,848 - \text{Rs } 7,200 \\ &= \text{Rs } 648\end{aligned}$$

***** END *****
