

Pair of Linear Equations in Two variables Ex 3.8 Q7

Answer :

Let the numerator and denominator of the fraction be x and y respectively. Then the fraction is $\frac{x}{y}$

The sum of the numerator and the denominator of the fraction is 18. Thus, we have

$$x + y = 18$$

$$\Rightarrow x + y - 18 = 0$$

If the denominator is increased by 2, the fraction reduces to $\frac{1}{3}$. Thus, we have

$$\frac{x}{y+2} = \frac{1}{3}$$

$$\Rightarrow 3x = y + 2$$

$$\Rightarrow 3x - y - 2 = 0$$

So, we have two equations

$$x + y - 18 = 0$$

$$3x - y - 2 = 0$$

Here x and y are unknowns. We have to solve the above equations for x and y .

By using cross-multiplication, we have

$$\frac{x}{1 \times (-2) - (-1) \times (-18)} = \frac{-y}{1 \times (-2) - 3 \times (-18)} = \frac{1}{1 \times (-1) - 3 \times 1}$$

$$\Rightarrow \frac{x}{-2-18} = \frac{-y}{-2+54} = \frac{1}{-1-3}$$

$$\Rightarrow \frac{x}{-20} = \frac{-y}{52} = \frac{1}{-4}$$

$$\Rightarrow \frac{x}{20} = \frac{y}{52} = \frac{1}{4}$$

$$\Rightarrow x = \frac{20}{4}, y = \frac{52}{4}$$

$$\Rightarrow x = 5, y = 13$$

Hence, the fraction is $\frac{5}{13}$.

Pair of Linear Equations in Two variables Ex 3.8 Q8

Answer :

Let the numerator and denominator of the fraction be x and y respectively. Then the fraction is $\frac{x}{y}$

If 2 is added to the numerator of the fraction, it reduces to $\frac{1}{2}$. Thus, we have

$$\frac{x+2}{y} = \frac{1}{2}$$

$$\Rightarrow 2(x+2) = y$$

$$\Rightarrow 2x + 4 = y$$

$$\Rightarrow 2x - y + 4 = 0$$

If 1 is subtracted from the denominator, the fraction reduces to $\frac{1}{3}$. Thus, we have

$$\frac{x}{y-1} = \frac{1}{3}$$

$$\Rightarrow 3x = y - 1$$

$$\Rightarrow 3x - y + 1 = 0$$

So, we have two equations

$$2x - y + 4 = 0$$

$$3x - y + 1 = 0$$

Here x and y are unknowns. We have to solve the above equations for x and y .

By using cross-multiplication, we have

$$\begin{aligned}\frac{x}{(-1) \times 1 - (-1) \times 4} &= \frac{-y}{2 \times 1 - 3 \times 4} = \frac{1}{2 \times (-1) - 3 \times (-1)} \\ \Rightarrow \frac{x}{-1 + 4} &= \frac{-y}{2 - 12} = \frac{1}{-2 + 3} \\ \Rightarrow \frac{x}{3} &= \frac{-y}{-10} = \frac{1}{1} \\ \Rightarrow \frac{x}{3} &= \frac{y}{10} = 1 \\ \Rightarrow x = 3, y &= 10\end{aligned}$$

Hence, the fraction is $\boxed{\frac{3}{10}}$.
