

Definite Integrals Ex 20.1 Q5

$$\text{Let } x^2 + 1 = t$$

$$\Rightarrow 2x \, dx = dt$$

$$\Rightarrow x \, dx = \frac{dt}{2}$$

Now,

$$x = 2 \Rightarrow t = 5$$

$$x = 3 \Rightarrow t = 10$$

$$\begin{aligned} \therefore \int_2^3 \frac{x}{x^2 + 1} \, dx &= \frac{1}{2} \int_5^{10} \frac{dt}{t} = \frac{1}{2} [\log t]_5^{10} \\ &= \frac{1}{2} [\log 10 - \log 5] \\ &= \frac{1}{2} \left[\log \frac{10}{5} \right] \\ &= \frac{1}{2} [\log 2] \\ &= \log \sqrt{2} \end{aligned}$$

$$\therefore \int_2^3 \frac{x}{x^2 + 1} = \log \sqrt{2}$$

Definite Integrals Ex 20.1 Q6

We have,

$$\int_0^{\infty} \frac{1}{a^2 + b^2 x^2} dx = \frac{1}{b^2} \int_0^{\infty} \frac{1}{\left(\frac{a}{b}\right)^2 + x^2} dx$$

We know that $\int \frac{1}{a^2 + x^2} = \frac{1}{a} \tan^{-1} \frac{x}{a}$

$$\begin{aligned} \therefore \frac{1}{b^2} \int_0^{\infty} \frac{1}{\left(\frac{a}{b}\right)^2 + x^2} dx &= \frac{1}{b^2} \left[\frac{b}{a} \tan^{-1} \left(\frac{bx}{a} \right) \right]_0^{\infty} \\ &= \frac{1}{ab} \left[\tan^{-1} \left(\frac{bx}{a} \right) \right]_0^{\infty} \\ &= \frac{1}{ab} \left[\tan^{-1} \infty - \tan^{-1} 0 \right] \\ &= \frac{1}{ab} \left[\frac{\pi}{2} - 0 \right] \\ &= \frac{\pi}{2ab} \\ \Rightarrow \int_0^{\infty} \frac{1}{a^2 + b^2 x^2} dx &= \frac{\pi}{2ab} \end{aligned}$$

We have,

$$\int_{-1}^1 \frac{1}{1+x^2} dx$$

$$\text{We know that } \int \frac{1}{1+x^2} dx = \tan^{-1} x$$

Now,

$$\int_{-1}^1 \frac{1}{1+x^2} dx$$

$$= \left[\tan^{-1} x \right]_{-1}^1$$

$$= \left[\tan^{-1} 1 - \tan^{-1}(-1) \right]$$

$$= \left[\frac{\pi}{4} - \left(\frac{-\pi}{4} \right) \right] \quad \left[\because \tan^{-1}(-1) = \frac{-\pi}{4} \right]$$

$$= \left[\frac{\pi}{4} + \frac{\pi}{4} \right]$$

$$= \frac{2\pi}{4}$$

$$\therefore \int_{-1}^1 \frac{1}{1+x^2} dx = \frac{\pi}{2}$$

Definite Integrals Ex 20.1 Q8

We have,

$$\int_0^{\infty} e^{-x} dx$$

We know that $\int e^{-x} dx = -e^{-x}$

Now,

$$\begin{aligned} & \int_0^{\infty} e^{-x} dx \\ &= \left[-e^{-x} \right]_0^{\infty} \\ &= \left[-e^{-\infty} + e^{-0} \right] \quad \left[\because e^{-\infty} = 0, \quad e^0 = 1 \right] \\ &= \left[-0 + 1 \right] \end{aligned}$$

$$\therefore \int_0^{\infty} e^{-x} dx = 1$$
