

Exercise 6A

Question 5:

Here, $a = 91$ m, $b = 98$ m and $c = 105$ m

$$\text{Therefore, } s = \frac{91 + 98 + 105}{2} = \frac{294}{2} = 147$$

$$\begin{aligned}\text{Area} &= \sqrt{s(s-a)(s-b)(s-c)} \\ &= \sqrt{147(147-91)(147-98)(147-105)} \\ &= \sqrt{147 \times 56 \times 49 \times 42} \\ &= \sqrt{49 \times 3 \times 7 \times 2 \times 2 \times 2 \times 49 \times 7 \times 3 \times 2} \\ &= 49 \times 3 \times 2 \times 2 \times 7 \\ &= 4116 \text{ m}^2\end{aligned}$$

Longest side = 105m $\Rightarrow b=105$

Let h be the height corresponding to the longest side.

$$\text{Area of the triangle} = \frac{1}{2} \times b \times h$$

$$\Rightarrow \frac{1}{2} \times b \times h = 4116$$

$$\Rightarrow 105 \times h = 2 \times 4116$$

$$\Rightarrow h = \frac{2 \times 4116}{105} = 78.4 \text{ m}$$

Question 6:

Let the sides of the triangle be $5x$, $12x$ and $13x$.

Its perimeter = $(5x + 12x + 13x) = 30x$

$\therefore 30x = 150$ m [given]

$$\Rightarrow x = \frac{150}{30} = 5 \text{ m}$$

Thus, sides of the triangle are;

$$5x = 5 \times 5 = 25 \text{ m}$$

$$12x = 12 \times 5 = 60 \text{ m}$$

$$13x = 13 \times 5 = 65 \text{ m}$$

Let $a = 25$ m, $b = 60$ m and $c = 65$ m.

$$\begin{aligned}\text{Now } s &= \frac{1}{2}(a+b+c) \\ &= \left(\frac{25+60+65}{2} \right) \text{ m} = \frac{150}{2} = 75 \text{ m}.\end{aligned}$$

$$\begin{aligned}\therefore \text{ area of the triangle} &= \sqrt{s(s-a)(s-b)(s-c)} \\ &= \sqrt{75(75-25)(75-60)(75-65)} \\ &= \sqrt{75 \times 50 \times 15 \times 10} \\ &= \sqrt{25 \times 3 \times 25 \times 2 \times 5 \times 3 \times 5 \times 2} \\ &= \sqrt{25 \times 25 \times 5 \times 5 \times 3 \times 3 \times 2 \times 2} \\ &= 25 \times 5 \times 3 \times 2 = 750 \text{ sq m}.\end{aligned}$$

\therefore area of the triangle = 750 sq m.
