

Quadratic Equations Ex 8.3 Q26

Answer :

We have been given

$$\frac{1}{x-2} + \frac{2}{x-1} = \frac{6}{x}$$

$$x^2 - x + 2x^2 - 4x = 6(x^2 - x - 2x + 2)$$

$$3x^2 - 13x + 12 = 0$$

Now we solve the above quadratic equation using factorization method.

Therefore,

$$3x^2 - 9x - 4x + 12 = 0$$

$$3x(x-3) - 4(x-3) = 0$$

$$(3x-4)(x-3) = 0$$

Now, one of the products must be equal to zero for the whole product to be zero. Hence we equate both the products to zero in order to find the value of x .

Therefore,

$$3x - 4 = 0$$

$$3x = 4$$

$$x = \frac{4}{3}$$

Or

$$x - 3 = 0$$

$$x = 3$$

Hence, $x = \frac{4}{3}$ or $x = 3$.

Quadratic Equations Ex 8.3 Q27

Answer :

We have been given

$$\frac{x+1}{x-1} - \frac{x-1}{x+1} = \frac{5}{6}$$

$$6(x^2 + 1 + 2x - x^2 - 1 + 2x) = 5(x^2 - 1)$$

$$5x^2 - 24x - 5 = 0$$

Now we solve the above quadratic equation using factorization method.

Therefore,

$$5x^2 - 25x + x - 5 = 0$$

$$5x(x-5) + 1(x-5) = 0$$

$$(5x+1)(x-5) = 0$$

Now, one of the products must be equal to zero for the whole product to be zero. Hence we equate both the products to zero in order to find the value of x .

Therefore,

$$5x + 1 = 0$$

$$5x = -1$$

$$x = \frac{-1}{5}$$

Or

$$x - 5 = 0$$

$$x = 5$$

Hence, $x = \frac{-1}{5}$ or $x = 5$.

Quadratic Equations Ex 8.3 Q28

Answer :

We have been given

$$\frac{x-1}{2x+1} + \frac{2x+1}{x-1} = \frac{5}{2}$$
$$2(x^2 + 1 - 2x + 4x^2 + 1 + 4x) = 5(2x^2 - x - 1)$$
$$10x^2 + 4x + 4 = 10x^2 - 5x - 5$$
$$9x + 9 = 0$$

Now we solve the above equation.

Therefore,

$$9x = -9$$

$$x = \frac{-9}{9}$$

$$x = -1$$

Hence $\boxed{x = -1}$.

Quadratic Equations Ex 8.3 Q29

Answer :

We have been given

$$3x^2 - 14x - 5 = 0$$

Now we solve the above quadratic equation using factorization method.

Therefore,

$$3x^2 - 15x + x - 5 = 0$$

$$3x(x-5) + 1(x-5) = 0$$

$$(3x+1)(x-5) = 0$$

Now, one of the products must be equal to zero for the whole product to be zero. Hence we equate both the products to zero in order to find the value of x .

Therefore,

$$3x+1 = 0$$

$$3x = -1$$

$$x = \frac{-1}{3}$$

Or

$$x-5 = 0$$

$$x = 5$$

Hence, $\boxed{x = \frac{-1}{3}}$ or $\boxed{x = 5}$.
