

Chapter 6 Determinants Ex 6.4 Q9

$$\text{Let } D = \begin{vmatrix} 9 & 5 \\ -2 & 3 \end{vmatrix} = 37$$

$$D_1 = \begin{vmatrix} 10 & 5 \\ 8 & 3 \end{vmatrix} = -10$$

$$D_2 = \begin{vmatrix} 9 & 10 \\ -2 & 8 \end{vmatrix} = 92$$

$$x = \frac{D_1}{D} = \frac{-10}{37}$$

$$y = \frac{D_2}{D} = \frac{92}{37}$$

Chapter 6 Determinants Ex 6.4 Q10

$$\text{Let } D = \begin{vmatrix} 1 & 2 \\ 3 & 1 \end{vmatrix} = -5$$

$$D_1 = \begin{vmatrix} 1 & 2 \\ 4 & 1 \end{vmatrix} = -7$$

$$D_2 = \begin{vmatrix} 1 & 1 \\ 3 & 4 \end{vmatrix} = 1$$

$$x = \frac{D_1}{D} = \frac{7}{5}$$

$$y = \frac{D_2}{D} = \frac{-1}{5}$$

Chapter 6 Determinants Ex 6.4 Q11

$$\text{Let } D = \begin{vmatrix} 3 & 1 & 1 \\ 2 & -4 & 3 \\ 4 & 1 & -3 \end{vmatrix}$$

$$\begin{aligned} \text{Expanding along } R_1 \\ &= 3(9) + (-1)(-18) + 1(18) \\ &= 27 + 18 + 18 = 63 \end{aligned}$$

$$\text{Again } D_1 = \begin{vmatrix} 2 & 1 & 1 \\ -1 & -4 & 3 \\ -11 & 1 & -3 \end{vmatrix}$$

$$\begin{aligned} \text{Expanding along } R_1 \\ &= 2(9) + (-1)(36) + 1(-45) \\ &= 18 - 36 - 45 = -63 \end{aligned}$$

$$\text{Again } D_2 = \begin{vmatrix} 3 & 2 & 1 \\ 2 & -1 & 3 \\ 4 & -11 & -3 \end{vmatrix}$$

$$\begin{aligned} \text{Expanding along } R_1 &= 3(3 + 33) - 2(-18) + 1(-22 + 4) \\ &= 108 + 36 - 18 = 126 \end{aligned}$$

$$\text{Also } D_3 = \begin{vmatrix} 3 & 1 & 2 \\ 2 & -4 & -1 \\ 4 & 1 & -11 \end{vmatrix}$$

$$\begin{aligned} \text{Expanding along } R_1 \\ &= 3(45) - 1(-18) + 2(18) = 135 + 18 + 36 = 189 \end{aligned}$$

$$\text{Now } x = \frac{D_1}{D} = \frac{-63}{63} = -1$$

$$y = \frac{D_2}{D} = \frac{126}{63} = 2$$

$$z = \frac{D_3}{D} = \frac{189}{63} = 3$$

$$\text{Let } D = \begin{vmatrix} 1 & -4 & -1 \\ 2 & -5 & 2 \\ -3 & 2 & 1 \end{vmatrix}$$

Expanding along R_1

$$= 1(-9) + 4(8) - 1(-11) = -9 + 32 + 11 = 34$$

$$\text{Again } D_1 = \begin{vmatrix} 11 & -4 & -1 \\ 39 & -5 & 2 \\ 1 & 2 & 1 \end{vmatrix}$$

Expanding along R_1

$$\begin{aligned} &= 11(-9) + 4(37) - 1(83) &= -99 + 148 - 83 \\ & &= 148 - 182 \\ & &= -34 \end{aligned}$$

$$\text{Also } D_2 = \begin{vmatrix} 1 & 11 & -1 \\ 2 & 39 & 2 \\ -3 & 1 & 1 \end{vmatrix}$$

Expanding along R_1

$$\begin{aligned} &= 1(37) - 11(8) - 1(119) \\ &= 37 - 88 - 119 = -170 \end{aligned}$$

$$\text{Also } D_3 = \begin{vmatrix} 1 & -4 & 11 \\ 2 & -5 & -39 \\ -3 & 2 & 1 \end{vmatrix}$$

Expanding along R_1

$$\begin{aligned} &= 1(-5 - 78) + 4(2 + 117) + 11(4 - 15) \\ &= -83 + 476 - 121 = 272 \end{aligned}$$

$$\text{Now } x = \frac{D_1}{D} = \frac{-34}{34} = -1$$

$$y = \frac{D_2}{D} = \frac{-170}{34} = -5$$

$$z = \frac{D_3}{D} = \frac{272}{34} = 8$$

Hence $x = -1, y = -5, z = 8$

***** END *****
