

Understanding shapes-I polygons Ex 15.1 Q6

Answer :

An n -sided convex polygon has $\frac{n(n-3)}{2}$ diagonals.

(i) A quadrilateral has $\frac{4(4-3)}{2} = 2$ diagonals.

There are 2 diagonals in the convex quadrilateral.

(ii) A regular hexagon has $\frac{6(6-3)}{2} = 9$ diagonals.

There are 9 diagonals in a regular hexagon.

(iii) A triangle does not have any diagonal in it.
