

Ratio Proportion and Unitary Method Ex 9.3 Q9

**Answer :**

Ratio of the length to the width of a school ground = 5 : 2

$\therefore$  Width = 40 m

$\therefore$  Length =  $\frac{5}{2} \times 40 = 5 \times 20 = 100$  m

Ratio Proportion and Unitary Method Ex 9.3 Q10

**Answer :**

Ratio of the sale of eggs on Sunday to that of the whole week = 2 : 9

When total eggs of Rs. 9 is sold in a week, the sale of eggs on Sunday = Rs. 2

When total eggs of Rs. 1 sold in a week, the sale of eggs on Sunday = Rs.  $\frac{2}{9}$

When total eggs of Rs. 360 sold in a week, the sale of eggs on Sunday =  
 $\frac{2}{9} \times 360 = 2 \times 40 = \text{Rs. } 80$

Ratio Proportion and Unitary Method Ex 9.3 Q11

**Answer :**

The ratio of copper and zinc in an alloy is 9 : 7.

When the weight of zinc is 7 kg, the weight of copper = 9 kg

When the weight of zinc is 1 kg, the weight of copper =  $\frac{9}{7}$  kg

When the weight of zinc is 9.8 kg, the weight of copper =  $\frac{9}{7} \times 9.8 = 12.6$  kg

Ratio Proportion and Unitary Method Ex 9.3 Q12

**Answer :**

The ratio of the income to the expenditure of a family is 7 : 6.

$\therefore$  Ratio of saving to the income =  $(7 - 6) : 7 = 1 : 7$  (Saving = Total income — Expenditure)

$\therefore$  Income of the family = Rs. 1400

$\therefore$  Saving =  $1400 \times \frac{1}{7} = \text{Rs. } 200$

Ratio Proportion and Unitary Method Ex 9.3 Q13

**Answer :**

The ratio of story books in a library to other books is 1 : 7.

Out of  $(1 + 7) = 8$  books, 1 book is a story book

Therefore,

When number of story books is 1, the total number of books = 8

When number of story books is 800, the total number of books =  $8 \times 800$   
= 6400
