

Congruence Ex 16.3 Q1

Answer :

1) We have $OA = OC$ and $OB = OD$ and $\angle AOB = \angle COD$ which are vertically opposite angles.
Therefore by SAS condition, $\triangle AOC \cong \triangle BOD$.

2) We have $BD = DC$
 $\angle ADB = \angle ADC = 90^\circ$
and $AD = AD$
Therefore by SAS condition, $\triangle ADB \cong \triangle ADC$.

3) We have $AB = DC$
 $\angle ABD = \angle CDB$ and $BD = DB$
Therefore by SAS condition, $\triangle ABD \cong \triangle CBD$.

4) We have $BC = QR$
 $\angle ABC = \angle PQR = 90^\circ$
and $AB = PQ$
Therefore by SAS condition, $\triangle ABC \cong \triangle PQR$.

Congruence Ex 16.3 Q2

Answer :

1) $AB = AD$
 $BC = CD$
and $AC = CA$
Therefore by SSS condition, $\triangle ABC \cong \triangle ADC$.

2) $AC = BD$
 $AD = BC$ and $AB = BA$
Therefore by SSS condition, $\triangle ABD \cong \triangle BAC$.

3) $AB = AD$
 $\angle BAC = \angle DAC$
and $AC = AC$
Therefore by SAS condition, $\triangle BAC \cong \triangle DAC$.

4) $AD = BC$
 $\angle DAC = \angle BCA$
and $AC = CA$
Therefore by SAS condition, $\triangle ABC \cong \triangle ADC$.

Congruence Ex 16.3 Q3

Answer :

We have $AO = OB$.

And $CO = OD$

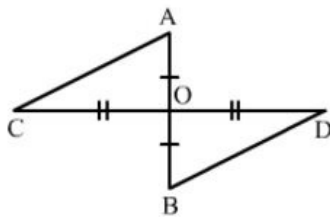

Also $\angle AOC = \angle BOD$

Therefore by SAS condition, $\triangle AOC \cong \triangle BOD$.

Therefore, statement (ii) is true.

Congruence Ex 16.3 Q4

Answer :

We have $AO = OB$ and $CO = OD$ since AB and CD bisect each other at O.

Also $\angle AOC = \angle BOD$ since they are opposite angles on the same vertex.

Therefore by SAS congruence condition, $\triangle AOC \cong \triangle BOD$.
