

Circles Ex 16.4 Q11

Answer :

We have to find $\angle ADB$ and $\angle AEB$

Construction: - O is center and r is radius and given that chord is equal to radius of circle

Now in $\triangle AOB$ we have

$AO = BO = AB$ (Radius of triangle)

So $\triangle AOB$ is equilateral triangle

$\angle AOB = 60^\circ$

So $\angle AOB = 2(\angle ADB)$ (angle from circumference is double from center)

Then $\angle ADB = 30^\circ$

So

$$\begin{aligned}\angle AEB &= \frac{1}{2}(\text{reflex } \angle AOB) \\ &= \frac{1}{2}(360^\circ - 60^\circ) \\ &= 150^\circ\end{aligned}$$

Hence

$$\boxed{\angle ADB = 30^\circ} \text{ and } \boxed{\angle AEB = 150^\circ}$$

***** END *****
