

Trigonometric Identities Ex 6.2 Q6

**Answer :**

$$\text{Given: } \cot \theta = \frac{1}{\sqrt{3}}$$

We have to find the value of the expression  $\frac{1 - \cos^2 \theta}{2 - \sin^2 \theta}$

We know that,

$$1 + \cot^2 \theta = \operatorname{cosec}^2 \theta$$

$$\Rightarrow \operatorname{cosec}^2 \theta = 1 + \left( \frac{1}{\sqrt{3}} \right)^2$$

$$\Rightarrow \operatorname{cosec}^2 \theta = \frac{4}{3}$$

Using the identity  $\sin^2 \theta + \cos^2 \theta = 1$ , we have

$$\begin{aligned} \frac{1 - \cos^2 \theta}{2 - \sin^2 \theta} &= \frac{\sin^2 \theta}{2 - \sin^2 \theta} \\ &= \frac{1}{2 - \frac{1}{\operatorname{cosec}^2 \theta}} \\ &= \frac{1}{2 \operatorname{cosec}^2 \theta - 1} \\ &= \frac{1}{2 \times \frac{4}{3} - 1} \\ &= \frac{3}{5} \end{aligned}$$

Hence, the value of the given expression is  $\frac{3}{5}$ .
