

Mensuration Ex 20.3 Q1

Answer:

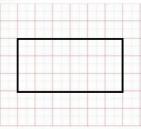

- (i) There are 16 complete squares in the given shape.
 - :: Area of one square = 1 cm²
 - :.Area of this shape = 16 \times 1 = 16 cm²
- (ii) There are 36 complete squares in the given shape.
 - : Area of one square = 1 cm²
 - :.Area of 36 squares = 36 \times 1 = 36 cm²
- (iii) There are 15 complete and 6 half squares in the given shape.
 - : Area of one square = 1 cm²
 - :. Area of this shape = $(15 + 6 \times \frac{1}{2}) = 18 \text{ cm}^2$
- (iv) There are 20 complete and 8 half squares in the given shape.
 - : Area of one square = 1 cm²
 - ∴ Area of this shape = $(20 + 8 \times \frac{1}{2}) = 24 \text{ cm}^2$
- (v) There are 13 complete squares, 8 more than half squares and 7 less than half squares in the given shape.
 - : Area of one square = 1 cm²
 - :. Area of this shape = $(13 + 8 \times 1) = 21 \text{ cm}^2$
- (vi) There are 8 complete squares, 6 more than half squares and 4 less than half squares in the given shape.
 - :: Area of one square = 1 cm²
 - :. Area of this shape = $(8 + 6 \times 1) = 14 \text{ cm}^2$

Mensuration Ex 20.3 Q2

Answer:

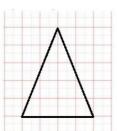

(i) A rectangle: This contains 18 complete squares.

If we assume that the area of one complete square is 1 cm², then the area of this rectangle will be 18 cm²

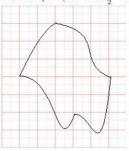

(ii) A triangle: This triangle contains 4 complete squares, 6 more than half squares and 6 less than half squares.

If we assume that the area of one complete square is 1 cm 2 , then the area of this shape = $(4 + 6 \times 1) = 10 \text{ cm}^2$

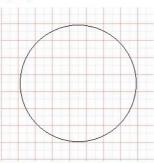

(iii) Any irregular figure: This figure consists of 10 complete squares, 1 exactly half square, 7 more than half squares and 6 less than half squares.

If we assume that the area of one complete square is 1 cm², then the area of this shape = $(10 + 1 \times \frac{1}{2} + 7 \times 1) = 17.5$ cm²

Mensuration Ex 20.3 Q3

Answer:

This circle on the squared paper consists of 21 complete squares, 15 more than half squares and 8 less than half squares.

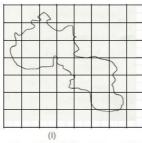

Let us assume that the area of 1 square is 1 cm².

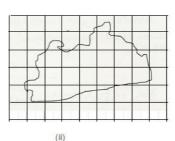

If we neglect the less than half squares while approximating more than half square as equal to a complete square, we get:

Area of this shape = $(21 + 15) = 36 \text{ cm}^2$

Mensuration Ex 20.3 Q4

Answer:

Using tracing paper, we traced both the figures on a graph paper.

(i) This figure contains 4 complete squares, 9 more than half squares and 9 less than half squares. Let us assume that the area of one square is 1 cm².

If we neglect the less than half squares and consider the area of more than half squares as equal to area of complete square, we get:

Area of this shape = $(4 + 9) = 13 \text{ cm}^2$

(ii) This figure contains 8 complete squares, 11 more than half squares and 10 less than half squares.

Let us assume that the area of one square is 1 cm².

If we neglect the less than half squares and consider the area of more than half squares as equal to area of complete square, we get:

Area of this shape = $(8 + 11) = 19 \text{ cm}^2$

On comparing the areas of these two shapes, we get that the area of Fig. (ii) is more than that of Fig. (i).
