

Powers Ex 2.1 Q1

## Answer:

We know that  $\mathbf{a}^{-\mathbf{n}} = \frac{1}{\mathbf{a}^{\mathbf{n}}}$  . Therefore,

$$2^{-3} = \frac{1}{2^3} = \frac{1}{8}$$

$$\overset{\text{(ii)}}{(-4)^{-2}} = \frac{1}{(-4)^2} = \frac{1}{16}$$

$$\frac{1}{3^{-2}} = 3^2 = 9$$

$$\binom{\text{iv}}{\left(\frac{1}{2}\right)^{-5}} = 2^5 = 32$$

$$\binom{\binom{(v)}{2}}{\binom{2}{3}}^{-2} = \binom{3}{2}^2 = \frac{9}{4}$$

Powers Ex 2.1 Q2

## Answer:

(i) We know from the property of powers that for every natural number a,  $a^{-1} = 1/a$ . Then:

$$3^{-1} + 4^{-1} = \frac{1}{3} + \frac{1}{4}$$
 --->  $(a^{-1} = 1/a)$ 

$$= \frac{4+3}{12}$$

$$= \frac{7}{12}$$

(ii) We know from the property of powers that for every natural number a,  $a^{-1} = 1/a$ . Moreover, a<sup>0</sup> is 1 for every natural number a not equal to 0. Then:

(iii) We know from the property of powers that for every natural number a,  $a^{-1} = 1/a$ . Moreover,  $a^0$  is 1 for every natural number a not equal to 0. Then:  $(3^{-1} + 4^{-1} + 5^{-1}) = 1$  ---> (Ignore the expression inside the bracket and use  $a^0 = 1$ 

(iv) We know from the property of powers that for every natural number a,  $a^{-1} = 1/a$ . Then:

(iv) We know from the property of powers that for every natural nu 
$$\left( \left( \frac{1}{3} \right)^{-1} - \left( \frac{1}{4} \right)^{-1} \right)^{-1} = (3-4)^{-1} \qquad ---> (a^{-1} = 1/a)$$

$$= \left( -1 \right)^{-1}$$

$$= -1 \qquad ---> (a^{-1} = 1/a)$$
