

Negative Numbers and Integers Ex 5.4 Q4

Answer:

Sum of
$$-1250$$
 and $1138 = (-1250) + 1138 = -112$
Sum of 1136 and $-1272 = 1136 + (-1272) = -136$
Now,
 $-136 - (-112) = -136 + 112 = -24$

Negative Numbers and Integers Ex 5.4 Q5

Answer:

We have to subtract -284 from the sum of 233 and -147. Sum of 233 and (-147) = 233 + (-147) = 233 - 147 = 86Now, we will subtract -284 from 86. 86 - (-284) = 86 + 284 = 370

Negative Numbers and Integers Ex 5.4 Q6

Answer:

Let x and y be two integers such that x + y = 238. Given: x = -122Now, x + y = 238 $\Rightarrow -122 + y = 238$ $\Rightarrow y = 238 + 122 = 360$ So, the other integer is 360.

Negative Numbers and Integers Ex 5.4 Q7

Answer:

Let x and y be two integers such that x + y = -223.

Given: x = 172

Now,

$$x + y = -223$$

$$\Rightarrow$$
 172 + $y = -223$

$$\Rightarrow y = -223 - 172$$

$$\Rightarrow y = -395$$
