

Page No 56 Solution: 01 False Solution: 02 Milk, Paint, Glass Solution: 03 Air is a mixture.

Mercury is a liquid metal and bromine is a liquid non-metal.

Solution: 05

Solution: 04

Sodium metal is soft and diamond is an extremely hard non-metal.

Solution: 06

Diamond is a non-metal which is good conductor of electricity.

Solution: 07 Mercury Solution: 08

Carbon is a solid non-metal, bromine is a liquid non-metal and

chlorine is a gaseous non-metal.

Solution: 09
(a) Malleability
(b) Ductility
Solution: 10

Non-metals show brittleness.

Solution: 11

This means that metals can be drawn into thin sheets and can also be drawn into wires.

Solution: 12

This means that non-metals break into pieces when they are

hammered. Solution: 13

This means that metals make a ringing sound when we strike them.

Solution: 14

This means that metals are shiny in nature.

Solution: 15 Mixtures.

Page No 57 Solution: 16

The given statement best describes a compound.

Solution: 17

Copper is an element, water is a compound and air is a mixture.

Solution: 18

Mixtures are generally heterogeneous in which there is a boundary separation between different substituents.

Solutions are homogeneous mixtures in which no separation is visible between different materials.

Solution: 19 Metalloids Solution: 20

- (a) An element is made up of only one kind of atoms.
- (b) Brine is a mixture whereas alcohol is a compound.
- (c) Brass is an alloy which is considered a mixture.
- (d) The three important metalloids are boron ,silicon and germanium.
- (e) The elements which are sonorous are called metals.

Solution: 21

(i) H₂O - Compound

(ii) He - Element

(iii) Cl₂ - Element

(iv) CO - Compound

(v) Co - Element

Solution: 22

Elements - Iron, Sulphur, Sodium and Carbon

Compounds - Iron sulphide, Chalk, Washing Soda and Urea

Solution: 23

Sugar contains carbon, hydrogen and oxygen.

Common salt contains sodium and chlorine.

Solution: 24

A pure substance is one which is made up of only one kind of atoms

or molecules.

Examples - Oxygen and sugar.

Solution: 25

Two types of pure substances -

(i) Pure substance made up of same kind of atoms.

Example - Sulphur

(ii) Pure substance made up of same kind of molecules.

Example - Water

Solution: 26

Ice, iron, hydrochloric acid, calcium oxide and mercury are the pure

substances Solution: 27

Mixture is another name for impure substances.

Examples - Milk and sea-water.

Solution: 28

Elements: Mercury, Iron, Diamond, Nitrogen, Graphite, Hydrogen,

Oxygen and chlorine.

Solution: 29

Air is a mixture because-

- (i) Air can be separated into its constituents like oxygen, nitrogen, etc. by physical process of fractional distillation.
- (ii) Air shows the properties of all the gases present in it.
- (iii) Liquid air does not have a fixed boiling point.

Water is compound because -

- (i) Water cannot be separated into its constituents, hydrogen and oxygen by physical methods.
- (ii) Heat and light are given out when water is prepared by burning hydrogen in oxygen.
- (iii) Water has standard b.p. of 100oC under standard atmospheric pressure.

Solution: 30

Two solid elements at room temp. - Iron and copper

Two liquid elements at room temp. - Mercury and bromine

Two gaseous elements at room temp. - Hydrogen and oxygen
