

Exercise 14F

Question 9:

Let the assumed mean (A) =900

Weekly wages	No of workers	$d_i = (x_i - A)$	f _i X d _i
(X _i)	(f _i)	=x _i -900	
800	7	-100	-700
820	14	-80	-1120
860	19	-40	-760
900	25	0	О
920	20	20	400
980	10	80	800
1000	5	100	500
	$\sum f_i = 100$		-880

Let $\overline{\boldsymbol{X}}$ be the mean. Using formula,

$$\bar{X} = A + \frac{\sum f_i \times d_i}{\sum f_i}$$

$$= \left[900 + \left(\frac{-880}{100} \right) \right]$$

$$= 900 - 8.80$$

$$= 891.20$$

Question 10:

Let the assumed mean be A = 67

Height in cm (X _i)	No of plants	$d_i=(x_i-A)$	$f_i \times d_i$
	(f _i)	=(x _i -67)	
61	5	-6	-30
64	18	-3	-54
67	42	О	0
70	27	3	81`
73	8	6	48
		100	$\sum f_i \times d_i = 45$

Let \overline{x} be the mean. Therefore,

Let
$$\overline{x}$$
 be the mean. Therefore, Mean, $\overline{x} = A + \frac{\sum f_i \times d_i}{\sum f_i}$, where A is the assumed mean
$$= 67 + \frac{45}{100}$$
$$= 67 + 0.45$$
$$= 67.45$$
 Therefore, mean height of the plants is 67.45 cm.

Therefore, mean height of the plants is 67.45 cm.

imean weekly wages =Rs. 891.20
