

## Trigonometric Ratios Ex 5.2 Q26

## Answer:

(i) Given:

$$\theta = 30^{\circ}$$
 ..... (1)

To verify:

$$\tan 2\theta = \frac{2\tan \theta}{1 - \tan^2 \theta} \dots (2)$$

Now consider LHS of the expression to be verified in equation (2)

Therefore,

## LHS = $\tan 2\theta$

Now by substituting the value of  $oldsymbol{ heta}$  from equation (1) in the above expression We get,

LHS = 
$$\tan 2 \times (30^{\circ})$$

$$= \tan 60^{\circ}$$

$$=\sqrt{3}$$

Now by substituting the value of  $\theta$  from equation (1) in the expression  $\frac{2 \tan \theta}{1 - \tan^2 \theta}$ 

We get

RHS = 
$$\frac{2 \tan(30^{\circ})}{1 - \tan^2(30^{\circ})}$$
 ..... (4)

RHS = 
$$\frac{2 \times \frac{1}{\sqrt{3}}}{1 - \left(\frac{1}{\sqrt{3}}\right)^2}$$
$$= \frac{\frac{2}{\sqrt{3}}}{1 - \frac{1^2}{\left(\sqrt{3}\right)^2}}$$
$$= \frac{\frac{2}{\sqrt{3}}}{\frac{3 - 1}{3}}$$

Now by comparing equation (3) and (4) We get,

LHS = RHS = 
$$\sqrt{3}$$
  
Hence  $\tan 2\theta = \frac{2 \tan \theta}{1 - \tan^2 \theta}$ 

(ii) Given:

$$\theta = 30^{\circ} \dots (1)$$

To verify:

$$\sin 2\theta = \frac{2 \tan \theta}{1 + \tan^2 \theta} \dots (2)$$

$$\sin 2\theta = \sin 2 \times 30$$

$$= \sin 60$$

$$= \frac{\sqrt{3}}{2}$$

Now consider right hand side

$$\frac{2\tan\theta}{1+\tan^2\theta} = \frac{2\tan 30}{1+\tan^2 30}$$
$$= \frac{2\times\frac{1}{\sqrt{3}}}{1+\left(\frac{1}{\sqrt{3}}\right)^2}$$
$$= \frac{\sqrt{3}}{2}$$

Hence it is verified that,

$$\sin 2\theta = \frac{2 \tan \theta}{1 + \tan^2 \theta}$$

(iii) Given:

$$\theta = 30^{\circ}$$
 ..... (1)

To verify:

$$\cos 2\theta = \frac{1 - \tan^2 \theta}{1 + \tan^2 \theta} \dots (2)$$

Now consider left hand side of the equation (2) Therefore,

$$\cos 2\theta = \cos 2 \times 30$$
$$= \cos 60$$
$$= \frac{1}{2}$$

Now consider right hand side of equation (2) Therefore,

$$\frac{1 - \tan^2 \theta}{1 + \tan^2 \theta} = \frac{1 - (\tan 30)^2}{1 + (\tan 30)^2}$$

$$= \frac{1 - (\frac{1}{\sqrt{3}})^2}{1 + (\frac{1}{\sqrt{3}})^2}$$

$$= \frac{1 - \frac{1}{3}}{1 + \frac{1}{3}}$$

$$= \frac{1}{2}$$

Hence it is verified that,

$$\cos 2\theta = \frac{1 - \tan^2 \theta}{1 + \tan^2 \theta}$$

(iv) Given:

$$\theta = 30^{\circ}$$
 ..... (1)

To verify:

$$\cos 3\theta = 4\cos^3 \theta - 3\cos \theta \dots (2)$$

Now consider left hand side of the expression in equation (2)

Therefore

$$\cos 3\theta = \cos 3 \times 30$$

$$=\cos 90$$

$$=0$$

Now consider right hand side of the expression to be verified in equation (2) Therefore,

$$4\cos^{3}\theta - 3\cos\theta = 4\cos^{3}30 - 3\cos 30$$
$$= 4 \times \left(\frac{\sqrt{3}}{2}\right)^{3} - 3 \times \frac{\sqrt{3}}{2}$$
$$= \frac{3\sqrt{3}}{2} - \frac{3\sqrt{3}}{2}$$
$$= 0$$

Hence it is verified that,

$$\cos 3\theta = 4\cos^3\theta - 3\cos\theta$$
