

Q15. A trading firm's average inventory is Rs.20,000 (cost). If the inventory turnover ratio is 8 times and the firm sells goods at a profit of 20% on sale, ascertain the profit of the firm. Solution:

```
Inventory Turnover Ratio = \frac{\text{Cost of Revenue from Operations}}{\text{Average Inventory}}
or, 8 = \frac{\text{Cost of Revenue from Operations}}{20,000}
or, Cost of Revenue from Operations = 20,000 \times 8
or, Cost of Revenue from Operations = 1,60,000
Let Sale Price be 100
Then Profit is 20
Hence, the Cost of Revenue from Operations = 100 - 20 = 80
If the Cost of Revenue from Operations is 1, then Revenue from operations = \frac{100}{80}
If the Cost of Revenue from Operations is 1,60,000 then,
Revenue from Operations = \frac{100}{80} \times 1,60,000 = 2,00,000
Profit = Net Revenue fro Operations - Cost of Revenue from Operations = 2,00,000 - 1,60,000
= 40,000
```
