

Playing with Numbers Ex 2.4 Q3

Answer:

The smallest 4-digit number is 1000.

$$1000 = 2 \times 500$$

$$= 2 \times 2 \times 250$$

$$= 2 \times 2 \times 2 \times 125$$

$$=2\times2\times2\times5\times25$$

$$=2\times2\times2\times5\times5\times5$$

$$1000 = 2 \times 2 \times 2 \times 5 \times 5 \times 5$$

Playing with Numbers Ex 2.4 Q4

Answer:

The largest 4-digit number is 9999.

We have:

3	9999
3	3333
11	1111
101	101
	1

Hence, the largest 4-digit number 9999 can be expressed in the form of its prime factors as 3 \times 3 \times 11 \times 101.

Playing with Numbers Ex 2.4 Q5

Answer:

The given number is 1729.

We have:

7	1729
13	247
19	19
	1

Thus, the number 1729 can be expressed in the form of its prime factors as 7 ×13 ×19.

Relation between its two consecutive prime factors:

The consecutive prime factors of the given number are 7, 13, and 19.

Clearly, 13 - 7 = 6 and 19 - 13 = 6

Here, in two consecutive prime factors, the latter is 6 more than the previous one.
