

Sets Ex 1.6 Q6(i)

Let
$$A = \{1,2,3\}$$
, $B = \{2,4,6\}$ and $C = \{2,5,7\}$

Then,

$$A \cap B = \{2\}$$

and
$$A \wedge C = \{2\}$$

Hence, $A \cap B = A \cap C$, but clearly $B \neq C$.

Sets Ex 1.6 Q6(ii)

Given $A \subset B$

To show: $C - B \subset C - A$

Let $x \in C - B$

 $\Rightarrow x \in C \text{ and } x \notin B$ [by definition of C - B]

 $\Rightarrow x \in C \text{ and } x \notin A \qquad \left[\because A \subset B \right]$

This can be seen by the venn diagram above

 $\Rightarrow x \in C - A$ [by definition of C - A]

Thus $x \in C - B \Rightarrow x \in C - A$. This is true for all $x \in C - B$

 $\therefore C-B \subset C-A$

Sets Ex 1.6 Q7

(i)

 $A \cup (A \cap B) = (A \cup A) \cap (A \cup B)$ [\vee union \cup is distributive over intersection \cap] = $A \cap (A \cup B)$ [\vee $A \cup A = A$]

 $A \qquad \qquad \begin{bmatrix} \cdots \ A \subset (A \cup B), \text{ as union of two sets is bigger} \\ \text{than each of the individual sets} \end{bmatrix}$

Hence, $A \cup (A \cap B) = A$ Proved.

(ii)

 $A \cap (A \cup B) = (A \cap A) \cup (A \cap B)$ [: $A \cap A = A$] = $A \cup (A \cap B)$ [using (i)]

Sets Ex 1.6 Q8

To find sets A,B and C such that $A \cap B \neq \emptyset$, $A \cap C = \emptyset$ and $B \cap C = \emptyset$ and $A \cap B \cap C = \emptyset$

Take
$$A = \{1, 2, 3\}$$

$$B = \{2, 4, 6\}$$

and
$$C = \{3, 4, 7\}$$

Then,

$$A \cap B = \{2\}$$

$$A \wedge C = \{3\}$$

$$A \cap C \neq \emptyset$$

$$B \cap C = \{4\}$$

However A, B and C have no elements in common,

$$A \cap B \cap C = \emptyset$$
