

Some Applications of Trigonometry Ex 12.1 Q4

Answer:

Let AC be the wire of length h m and C be the point, makes an angle of 45° In a triangle ABC, given that height of electric pole is BC = 2m and angle $C = 45^{\circ}$ Now we have to find the length of wire.

So we use trigonometrically ratios.

In a triangle ABC,

$$\Rightarrow \sin C = \frac{AB}{AC}$$

$$\Rightarrow \sin 45^\circ = \frac{10}{h}$$

$$\Rightarrow \frac{1}{\sqrt{2}} = \frac{10}{h}$$

$$\Rightarrow h = 10\sqrt{2}$$

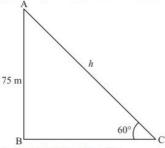

Therefore h = 14.1

Hence the length of wire is $\boxed{14.1}$ meters.

Some Applications of Trigonometry Ex 12.1 Q5 Answer:

Let AC be the string of length h m and C be the point, makes an angle of 60° and the kite is flying at the height of 75 m from the ground level.

In a triangle ABC, given that height of kite is AB = 75 m and angle C = 60° Now we have to find the length of string.

So we use trigonometric ratios.

In a triangle ABC.

$$\Rightarrow \sin C = \frac{AB}{AC}$$

$$\Rightarrow \sin 60^\circ = \frac{75}{h}$$

$$\Rightarrow \frac{\sqrt{3}}{2} = \frac{75}{h}$$

$$\Rightarrow h = \frac{150}{\sqrt{3}}$$

Therefore h = 86.6

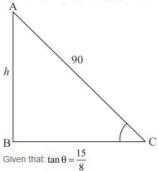

Hence length of string is 87 meters.

Some Applications of Trigonometry Ex 12.1 Q6 Answer:

Let AB be the kite of height h m and the length of string between kite and a point on the ground is 90 meters. So AC=90 meters and $\angle ACB=\theta$

Now we have to find the height of kite.

We have the corresponding figure as follows

Since $\sec^2 \theta = 1 + \tan^2 \theta$

$$\Rightarrow$$
 $\sec^2 \theta = 1 + \frac{225}{64}$

$$\Rightarrow$$
 $\sec^2 \theta = \frac{289}{64}$

$$\Rightarrow \cos^2 \theta = \frac{64}{289}$$

$$\Rightarrow \cos \theta = \frac{8}{17}$$

Again,

Since $\sin^2 \theta = 1 - \cos^2 \theta$

$$\Rightarrow \sin^2 \theta = 1 - \frac{64}{289}$$

$$\Rightarrow \sin^2 \theta = \frac{289 - 64}{289}$$

$$\Rightarrow \qquad \sin \theta = \frac{15}{17}$$

Now, in a triangle ABC

$$\Rightarrow \sin \theta = \frac{h}{90}$$

$$\Rightarrow \frac{15}{17} = \frac{h}{90}$$

$$\Rightarrow h = \frac{15 \times 90}{17}$$

$$\Rightarrow h = 79.41$$

Hence the height kite is 79.41 meters.
