

Decimals Ex 7.2 Q1

Answer:

(i)
$$\frac{3}{10} = 0.3$$

(ii) $2 + \frac{5}{10} = 2.5$
(iii) $30 + \frac{1}{10} = 30.1$
(iv) $22 + \frac{6}{10} = 22.6$
(v) $100 + 2 + \frac{3}{10} = 102.3$

Decimals Ex 7.2 Q2

Answer:

(i) We have 3 tens, 6 ones and 2 tenths.

Therefore, the decimal is 36.2

(ii) We have 7 hundreds, 5 ones and 7 tenths.

Therefore, the decimal is 705.7.

(iii) We have 2 hundreds, 6 tens, 5 ones and 1 tenths.

Therefore, the decimal is 265.1.

(iv) We have 2 hundreds, 7 tens, 9 ones and 5 tenths.

Therefore, the decimal is 279.5.

Decimals Ex 7.2 Q3

Answer:

(i) $\frac{22}{10}$

Since the denominator is ten, the decimal is 2.2.

(ii) 3/2

Making the denominator 10, we have

3/2

$$= \frac{3 \times 5}{2 \times 5}$$

$$= \frac{15}{10}$$

$$= 1.5$$

(iii) 2/5

Making the denominator 10, we have

$$= \frac{2 \times 2}{5 \times 2}$$
$$= \frac{4}{10}$$

$$=\frac{4}{10}$$

$$= 0.4$$

Decimals Ex 7.2 Q4

Answer:

(i)
$$40\frac{2}{5} = 40 + \frac{2}{5}$$

To write in decimal, we need to make the denominator 10 by multiplying it by a number. But, to maintain the value of the fraction, we should also multiply the numerator by the same number. Thus,

$$=40 + \frac{2 \times 2}{5 \times 2}$$

$$=40+\frac{4}{10}$$

(ii)
$$39\frac{2}{10} = 39 + \frac{2}{10}$$

Here, the denominator is 10

Therefore, the decimal is 39.2

(iii)
$$4\frac{3}{5} = 4 + \frac{3}{5}$$

To write in decimal, we need to make the denominator 10 by multiplying it by a number. But, to maintain the value of the fraction, we should also multiply the numerator by the same number. Thus, we get

$$=4+\frac{3\times 5}{5\times 2}$$

 $=4+\frac{6}{10}$

(iv)
$$25\frac{1}{2} = 25 + \frac{1}{2}$$

To write in decimal, we need to make the denominator 10 by multiplying it by a number. But, to maintain the value of the fraction, we should also multiply the numerator by the same number. Thus, we get

$$= 25 + \frac{1 \times 5}{2 \times 5}$$

$$= 25 + \frac{5}{10}$$
