

Pair of Linear Equations in Two varibles Ex 3.3 Q11 Answer:

The given equations are: $\sqrt{2}x-\sqrt{3}y=0 \cdots (i)$ $\sqrt{3}x-\sqrt{8}y=0 \cdots (ii)$ Multiply equation (i) by $\sqrt{3}$ and equation (ii) by $\sqrt{2}$ and subtract equation (ii) from (i), we get $\frac{\sqrt{6}x-3y=0}{\left(2\sqrt{6}-3\right)y=0}$ $\frac{\sqrt{6}x-2\sqrt{6}y=0}{\left(2\sqrt{6}-3\right)y=0}$ $\Rightarrow y=0$ Put the value of y in equation (i), we get $\sqrt{2}x+0\times y=0$ $\Rightarrow x=0$ Hence the value of x=0 and y=0

Pair of Linear Equations in Two varibles Ex 3.3 Q12

Answer:

The given equations are:

$$3x - \frac{y+7}{11} + 2 = 10$$

$$\Rightarrow 3x - \frac{(y+7)}{11} = 8$$

$$\Rightarrow \frac{33x - y - 7}{11} = 8$$

$$\Rightarrow 33x - y - 7 = 88$$

$$\Rightarrow 33x - y = 95 \dots (1)$$

$$2y + \frac{x+11}{7} = 10$$

 $\Rightarrow \frac{14y+x+11}{7} = 10$
 $\Rightarrow 14y + x + 11 = 70$
 $\Rightarrow 14y + x = 59$
 $\Rightarrow x + 14y = 59$ (2)
Multiply equation (1) by 14, we get
 $462x - 14y = 1330$ (3)
adding (2) and (3), we get

$$(x + 14y) + (462x - 14y) = 59 + 1330$$

 $\Rightarrow 463x = 1389$
 $\Rightarrow x = 3$

Substituting the value of x in (2), we get

$$3 + 14y = 59$$

$$\Rightarrow 14y = 59 - 3$$

$$\Rightarrow 14y = 56$$

$$\Rightarrow y = 4$$

Hence the value of x and y are x = 3 and y = 4

Pair of Linear Equations in Two varibles Ex 3.3 Q13

Answer:

The given equations are:

$$2x - \frac{3}{y} = 9$$
 ... (i)

$$3x + \frac{7}{y} = 2 \dots (ii)$$

Multiply equation (i) by 3 and (ii) by 2 and subtract equation (ii) from (i) we get

$$6x - \frac{9}{y} = 27$$

$$\frac{6x + \frac{14}{y} = 4}{\frac{-23}{y} = 23}$$

$$\frac{-23}{2} = 23$$

$$\Rightarrow y = -1$$

Put the value of y in equation (i), we get

$$2x - \frac{3}{-1} = 9$$

$$\Rightarrow 2x = 6$$

$$\Rightarrow x = 3$$

Hence the value of x = 3 and y = -1

****** END *******
